

SECTION 23 STREET TREES

Wherever possible, the developer shall endeavor to preserve existing trees. Existing trees, when located in reasonable proximity to the street line, may substitute for required new street tree planting. In other cases, the developer shall refer to "*TREES FOR NEW JERSEY STREETS*", (available from the New Jersey Federation of Shade Tree Commissions Cook College, Box 231, Blake Hall, Rutgers, The State University New Brunswick, NJ 08903), consult with the Gloucester City Shade Tree Commission, if there is one, or if not, the Camden County Agricultural Extension Service. On the advice of such agency, the developer shall propose and execute a street tree planting scheme, providing acceptable species of shade or ornamental trees at least three (3") inches in diameter, measuring three (3') feet above the ground, located in a manner which will result in a minimum of damage to sidewalks or utilities.

The following are examples to street trees that a developer may consider for use in Gloucester City:

- Ginkgo spp.
- Pin oak
- Princeton elm
- Red Maple
- Redmond Linden
- Regent Scholartree
- Village Green Zelkova

A typical tree planting detail is included in SECTION 31 DETAILS.
