**Purpose:** To provide treatments for the reduction of the invasive insect species the spotted lanternfly to affected hardwood trees in public spaces. This program is a population reduction only and no warranty is expressed or implied by this treatment agreement. Furthermore, Viking makes no claim to the protection of tree/plant health from diseases or damage that may be caused by spotted lanternfly. Please consult an arborist or horticultural professional to determine the health of affected trees.

**Precautionary Procedures:** The township is to be notified in writing (email acceptable) of the treatment date, material to be utilized, Safety Data Sheet, relevant precautionary statements, and posting sign to be placed at the treatment site (see attached).

The township contact must acknowledge in writing that they will be making a community wide announcement regarding the treatment. This may be done via website, email, or via the postal service. This notification should include three agreed upon treatment dates to allow for inclement weather, the location of treatment site, precautionary statements, emergency contacts, reentry time, and purpose of treatment.

It is recommended that the township provide security at the site for the duration of the treatment and until the safe reentry time is reached, approximately 1 hour after the applications has been completed.

The attached warning sign must be utilized at the site of the treatment (signs available in the Viking SharePoint Site.) The sign must be placed at a central location within the park. Examples may include outside of a restroom, public information board, etc. If no such place is present, it must be posted on a tree or installed post where it is most likely to be seen by those entering the park.

If a treatment site is outside of direct view of the central posting, a second sign is to be posted at the site of the application as well. Depending on the size of the site, multiple signs may be needed.

Treatment flags are to be placed near treated trees prior to the application. These are to be placed just outside of the dripline of the tree to serve as a treatment warning. The number of flags used is to be based upon the number of trees and their proximity to one another. Enough flags are to be used to clearly identify areas of treatment. These flags are to be placed in a manner that they are apparent to people approaching the treatment area.

**ALL FLAGS MUST BE REMOVED BETWEEN 24-72 HOURS AFTER THE APPLICATION BY VIKING.**

Precipitation, wind direction, and windspeed will be evaluated on the day of the treatment. If weather conditions may contribute to drift or runoff to non-target sites, treatments may be postponed until more favorable weather conditions occur.

A spill management kit, first aid kit, and fire extinguisher are to be present at the treatment site.

**Treatment Methodology:** Spot applications will be made to hardwood trees utilizing an appropriately labeled pesticide product. Evergreen and other softwood trees will not be treated. All materials used are approved for use by both federal and state pesticide regulatory agencies for use on spotted lanternflies and the targeted treatment locations. These treatments may be applied using a powered backpack sprayer. Power spray rigs and backpack misters may be utilized if deemed necessary by the servicing branches manager.

Treatments will be applied to the trunks, branches, and foliage of hardwood trees to a height not to exceed 30’ where safe to do so. Trees near bodies of water, property lines (abutting properties), edible plants, and flowering plants may not be treated to ensure compliance with all state and federal regulations and to minimize any potential for negative environmental impact.

**Personal Protective Equipment:** All applicators and persons entering the treatment area prior to the conclusion of the safe reentry interval shall wear at a minimum: long pants, long sleeved shirt, shoes with socks, chemical resistant gloves, and face shield or goggles.
Notification of the Use of Pesticides
(This notice should be received at least 72 hours prior to pesticide use)

Date Issued: 6/21/24

To: Residents whom it may concern

From: Township Contact: __Alex Tedesco, Dept Public Works__ Phone Number: 856-228-3144

This notice is to advise you that the following pesticides will be used at: 115 N Burlington St.,
Middlesex Neighborhood Park

Location of the pesticide application: Hardwood Trees

Reason for the pesticide application: Reduction of Spotted Lanternfly activity

If an outdoor application, 3 dates must be listed, in chronological order, on which the outdoor application may take place if the preceding date is canceled; and the time the application is scheduled to occur.

DATE / TIME 6/26/2024 8am-5pm DATE / TIME 6/27/2024 8am-5pm DATE / TIME 6/28/2024 8am-5pm

Description of the possible adverse effects of the pesticides as per the Safety Data Sheets for the pesticides to be used, if available:
Harmful if absorbed through skin; Avoid breathing spray mist or vapor; Prolonged or frequent skin contact may cause allergic reactions in some individuals.

Pesticide product label instructions and precautions related to Public Safety: Please avoid all treated areas until dry.

Note: as required by law, we are advising you of the following statement:
The Office of Pesticide Programs of the United States Environmental Protection Agency has stated:
“Where possible, persons who potentially are sensitive, such as pregnant women, infants, and children, should avoid any unnecessary pesticide exposure.”

REMEMBER: Whenever a non-low impact pesticide is used there is also a Restricted Entry Interval (REI) that begins when the pesticide application ends. This Restricted Entry Interval is until the product is dry, which is approximately one hour after application has been completed.

In case of emergency please contact Poison Control at 800-222-1222

The Office of Pesticide Programs of the United States Environmental Protection Agency has stated:
“Where possible, persons who potentially are sensitive, such as pregnant women, infants, and children, should avoid any unnecessary pesticide exposure.”

REMEMBER: Whenever a non-low impact pesticide is used there is also a Restricted Entry Interval (REI) that begins when the pesticide application ends. This Restricted Entry Interval is until the product is dry, which is approximately one hour after application has been completed.

In case of emergency please contact Poison Control at 800-222-1222

Viking Termite and Pest Control emergency contact name: Viking Pest Control Phone # 1(800) 618-2847
**Purpose:** To provide treatments for the reduction of the invasive insect species the spotted lanternfly to affected hardwood trees in public spaces. This program is a population reduction only and no warranty is expressed or implied by this treatment agreement. Furthermore, Viking makes no claim to the protection of tree/plant health from diseases or damage that may be caused by spotted lanternfly. Please consult an arborist or horticultural professional to determine the health of affected trees.

**Precautionary Procedures:** The township is to be notified in writing (email acceptable) of the treatment date, material to be utilized, Safety Data Sheet, relevant precautionary statements, and posting sign to be placed at the treatment site (see attached).

The township contact must acknowledge in writing that they will be making a community wide announcement regarding the treatment. This may be done via website, email, or via the postal service. This notification should include three agreed upon treatment dates to allow for inclement weather, the location of treatment site, precautionary statements, emergency contacts, reentry time, and purpose of treatment.

It is recommended that the township provide security at the site for the duration of the treatment and until the safe reentry time is reached, approximately 1 hour after the applications has been completed.

The attached warning sign must be utilized at the site of the treatment (signs available in the Viking SharePoint Site.) The sign must be placed at a central location within the park. Examples may include outside of a restroom, public information board, etc. If no such place is present, it must be posted on a tree or installed post where it is most likely to be seen by those entering the park.

If a treatment site is outside of direct view of the central posting, a second sign is to be posted at the site of the application as well. Depending on the size of the site, multiple signs may be needed.

Treatment flags are to be placed near treated trees prior to the application. These are to be placed just outside of the dripline of the tree to serve as a treatment warning. The number of flags used is to be based upon the number of trees and their proximity to one another. Enough flags are to be used to clearly identify areas of treatment. These flags are to be placed in a manner that they are apparent to people approaching the treatment area.

**ALL FLAGS MUST BE REMOVED BETWEEN 24-72 HOURS AFTER THE APPLICATION BY VIKING.**

Precipitation, wind direction, and windspeed will be evaluated on the day of the treatment. If weather conditions may contribute to drift or runoff to non-target sites, treatments may be postponed until more favorable weather conditions occur.

A spill management kit, first aid kit, and fire extinguisher are to be present at the treatment site.

**Treatment Methodology:** Spot applications will be made to hardwood trees utilizing an appropriately labeled pesticide product. Evergreen and other softwood trees will not be treated. All materials used are approved for use by both federal and state pesticide regulatory agencies for use on spotted lanternflies and the targeted treatment locations. These treatments may be applied using a powered backpack sprayer. Power spray rigs and backpack misters may be utilized if deemed necessary by the servicing branches manager.

Treatments will be applied to the trunks, branches, and foliage of hardwood trees to a height not to exceed 30’ where safe to do so. Trees near bodies of water, property lines (abutting properties), edible plants, and flowering plants may not be treated to ensure compliance with all state and federal regulations and to minimize any potential for negative environmental impact.

**Personal Protective Equipment:** All applicators and persons entering the treatment area prior to the conclusion of the safe reentry interval shall wear at a minimum: long pants, long sleeved shirt, shoes with socks, chemical resistant gloves, and face shield or goggles.
Notification of the Use of Pesticides
(This notice should be received at least 72 hours prior to pesticide use)

Date Issued: 6/21/24

To: Residents whom it may concern

From: Township Contact: Alex Tedesco, Dept Public Works Phone Number: 856-228-3144

This notice is to advise you that the following pesticides will be used at: Division Street Division Saint Playground

Description of the possible adverse effects of the pesticides as per the Safety Data Sheets for the pesticides to be used, if available:
Harmful if absorbed through skin; Avoid breathing spray mist or vapor; Prolonged or frequent skin contact may cause allergic reactions in some individuals.

Pesticide product label instructions and precautions related to Public Safety: Please avoid all treated areas until dry.

Note: as required by law, we are advising you of the following statement:
The Office of Pesticide Programs of the United States Environmental Protection Agency has stated: “Where possible, persons who potentially are sensitive, such as pregnant women, infants, and children, should avoid any unnecessary pesticide exposure.”

REMEMBER: Whenever a non-low impact pesticide is used there is also a Restricted Entry Interval (REI) that begins when the pesticide application ends. This Restricted Entry Interval is until the product is dry, which is approximately one hour after application has been completed.

In case of emergency please contact Poison Control at 800-222-1222

Viking Termite and Pest Control emergency contact name: Viking Pest Control Phone # 1(800) 618-2847
**Purpose:** To provide treatments for the reduction of the invasive insect species the spotted lanternfly to affected hardwood trees in public spaces. This program is a population reduction only and no warranty is expressed or implied by this treatment agreement. Furthermore, Viking makes no claim to the protection of tree/plant health from diseases or damage that may be caused by spotted lanternfly. Please consult an arborist or horticultural professional to determine the health of affected trees.

**Precautionary Procedures:** The township is to be notified in writing (email acceptable) of the treatment date, material to be utilized, Safety Data Sheet, relevant precautionary statements, and posting sign to be placed at the treatment site (see attached).

The township contact must acknowledge in writing that they will be making a community wide announcement regarding the treatment. This may be done via website, email, or via the postal service. This notification should include three agreed upon treatment dates to allow for inclement weather, the location of treatment site, precautionary statements, emergency contacts, reentry time, and purpose of treatment.

It is recommended that the township provide security at the site for the duration of the treatment and until the safe reentry time is reached, approximately 1 hour after the applications has been completed.

The attached warning sign must be utilized at the site of the treatment (signs available in the Viking SharePoint Site.) The sign must be placed at a central location within the park. Examples may include outside of a restroom, public information board, etc. If no such place is present, it must be posted on a tree or installed post where it is most likely to be seen by those entering the park.

If a treatment site is outside of direct view of the central posting, a second sign is to be posted at the site of the application as well. Depending on the size of the site, multiple signs may be needed.

Treatment flags are to be placed near treated trees prior to the application. These are to be placed just outside of the dripline of the tree to serve as a treatment warning. The number of flags used is to be based upon the number of trees and their proximity to one another. Enough flags are to be used to clearly identify areas of treatment. These flags are to be placed in a manner that they are apparent to people approaching the treatment area.

**ALL FLAGS MUST BE REMOVED BETWEEN 24-72 HOURS AFTER THE APPLICATION BY VIKING.**

Precipitation, wind direction, and windspeed will be evaluated on the day of the treatment. If weather conditions may contribute to drift or runoff to non-target sites, treatments may be postponed until more favorable weather conditions occur.

A spill management kit, first aid kit, and fire extinguisher are to be present at the treatment site.

**Treatment Methodology:** Spot applications will be made to hardwood trees utilizing an appropriately labeled pesticide product. Evergreen and other softwood trees will not be treated. All materials used are approved for use by both federal and state pesticide regulatory agencies for use on spotted lanternflies and the targeted treatment locations. These treatments may be applied using a powered backpack sprayer. Power spray rigs and backpack misters may be utilized if deemed necessary by the servicing branches manager.

Treatments will be applied to the trunks, branches, and foliage of hardwood trees to a height not to exceed 30’ where safe to do so. Trees near bodies of water, property lines (abutting properties), edible plants, and flowering plants may not be treated to ensure compliance with all state and federal regulations and to minimize any potential for negative environmental impact.

**Personal Protective Equipment:** All applicators and persons entering the treatment area prior to the conclusion of the safe reentry interval shall wear at a minimum: long pants, long sleeved shirt, shoes with socks, chemical resistant gloves, and face shield or goggles.
Notification of the Use of Pesticides
